Master's Degree Qualifications for HEALTH (Academically-oriented) 7 th Level (MASTER'S DEGREE)						
NQF-HETR LEVEL	KNOWLEDGE (KNW) -Theoretical -Conceptual	SKILLS (SKL) -Cognitive -Practical	PERSONAL & OCCUPATIONAL COMPETENCES			
			Autonomy & Responsibility Competence (ACR)	Learning to Learn Competence (LLC)	Communication and Social Competence (CSC)	Occupational and/or Vocational Competence (OVC)
7 th CYCLE MASTER'S EQF-LLL: 7 th CYCLE QF-EHEA: 2 nd CYCLE	Qualifications that signify completion of the seventh cycle are awarded to students who					
	KNW 1- have access to advanced knowledge in the field of Physiology through scientific research; evaluate, interpret and apply knowledge.	SKL 1- complete and apply knowledge based on limited or pathological data through scientific methods; integrate knowledge from different disciplines.	ACR 1- assume the leadership role in multi-disciplinary teams; produce solutions in complicated situations and take responsibility. ACR 2- have access to advanced knowledge in the field of physiology through scientific research; evaluate, interpret and apply knowledge.	LLC 1- are aware of new and developing applications in the profession; examine and learn these applications, when required.	CSC 1- establish oral and written communication in a foreign language at minimum B2 level, as defined by the European Language Portfolio.	OVC 1- comply with social, scientific and ethical values in the process of collecting, interpreting and reporting data, and in all professional activities.
	KNW 2- have extensive knowledge on recent techniques and methods used in physiology, and the constraints of these techniques and methods.	SKL 2- define problems related with physiology; and develop methods for their solution, and use innovative methods in problem solving.	ACR 3- complete and apply knowledge based on limited or pathological data through scientific methods; integrate knowledge from different disciplines.	LLC 2- complete and apply knowledge based on limited or pathological data through scientific methods; integrate knowledge from different disciplines.	CSC 2- report systematically and clearly in written or oral form the processes and results of their research/work in national and international settings.	OVC 2- complete and apply knowledge based on limited or pathological data through scientific methods; integrate knowledge from different disciplines.
	KNW 3- complete and apply knowledge based on limited or pathological data through scientific methods; integrate knowledge from different disciplines.	SKL 3- generate new and/or original ideas and methods; and develop innovative solutions in organ, system or tissue level.	ACR 4- define problems related with physiology; and develop methods for their solution, and use innovative methods in problem solving.	LLC 3- define problems related with physiology; and develop methods for their solution, and use innovative methods in problem solving.	CSC 3- describe social aspects of physiology applications.	OVC 3- assume the leadership role in multi-disciplinary teams; produce solutions in complicated situations and take responsibility.
	KNW 4- are aware of new and developing applications in the profession; examine and learn these applications, when required.	SKL 4- design and conduct at the molecular and macro level experiment-based research; solve and interpret complex problems encountered in this process.	ACR 5- generate new and/or original ideas and methods; and develop innovative	LLC 4- generate new and/or original ideas and methods; and develop innovative solutions in organ, system or tissue level.	CSC 4- have access to advanced knowledge in the field of physiology through scientific research; evaluate, interpret and apply knowledge. CSC 5- complete and apply knowledge based on limited or pathological data through scientific	OVC 4- report systematically and clearly in written or oral form the processes and results of their research/work in national and international settings.

			solutions in organ, system or tissue level. ACR 6- design and conduct at the molecular and macro level experiment-based research; solve and interpret complex problems encountered in this process		methods; integrate knowledge from different disciplines. CSC 6- define problems related with physiology; and develop methods for their solution, and use innovative methods in problem solving. CSC 7- have extensive knowledge on recent techniques and methods used in physiology, and the restrictions of these techniques and methods. CSC 8- design and conduct at the molecular and macro level experiment-based research; solve and interpret complex problems encountered in this process.
