

## **MEDICAL BIOLOGY MASTER PROGRAM OUTCOMES**

- 1- Gains up-to-date evidence-based knowledge and skills in the field of medical biology.
- 2- Uses evidence-based knowledge for research in the field of medical biology, life sciences, with the perspective of cell biology, molecular biology and molecular genetics.
- 3- Develops scientific projects.
- 4- Analyzes the scientific data obtained in the literature review.
- 5- Uses statistical methods in scientific studies and interprets statistical data.
- 6- Becomes aware of ethical values in scientific studies.
- 7- Can use various sources to reach information.
- 8- Gains knowledge about the use of necessary devices and tools.
- 9- Complies with biosafety rules in the laboratory.
- 10- Have the awareness of lifelong learning.
- 11- Makes scientific articles and presentations in national and international field.
- 12- Becomes a researcher in national and international scientific studies, including interdisciplinary studie.
